

CHALLENGE 01 · POWERED BY ELEVENLABS

A judge's guide to Haggl

An AI advocate that reads a hospital bill, finds the billing errors and the statutes on the patient's side, calls the billing office, and talks the balance down on a live phone call. This guide walks you through the product one screen at a time.

Try it live

HAGGLFOR.ME

The whole product is live at <https://hagglfor.me>. Log in as any demo patient below. Logged out, you land on Maya's flagship case by default.

DEMO LOGINS

LOGIN	CASE	THE STORY
maya@hagglfor.me	Mercy General ER, \$4,287	The flagship. 4 findings (duplicate, upcode, unbundle, EOB mismatch), 3 parties, a -62% arc.
dan@hagglfor.me	\$2,140 in collections	Collections route: duplicate and markup flags, a hard floor, the lump-sum-anchor ladder.
nina@hagglfor.me	\$3,120 anesthesia bill	No Surprises Act: cite the statute and file a complaint, do not negotiate a protected balance.

THE CENTRAL ARGUMENT

there's a billing error inflating this bill by \$412, and several line items are priced well above the Medicare and posted-cash-price benchmark.

4 FINDINGS ON THIS BILLTOTAL FLAGGED: \$3,065

CPT 71046 · Duplicate charge
Chest X-ray, 2 views+\$412

EVIDENCE
Itemized bill lists this code twice on the same date of service. A clean duplicate.

CPT 99285 · Unneeded service level

N

Nothing dials until you approve. Review who Haggl will call and what it will argue, then press "Looks right, make the calls." That hands the confirmed case file to the engine and launches the calls.

Here's the plan: confirm before we dial

We read your bill and EOB from Mercy General Hospital. Review what we found and what we'll argue. We don't dial until you approve.

Who we'll be negotiating with

Mercy General Hospital • \$4,287

Bay State Emergency Physicians • \$640

Meridian Recovery Services • \$980

4 problems found on this bill

Total flagged: \$3,477

Duplicate charge +\$412

Upcoded service level +\$2,011

Unbundled lab/procedure codes +\$642

Bill doesn't match insurance EOB +\$412

What that's worth

\$1,739–\$3,065

Estimated savings if the calls go our way: 41–72% off your \$4,287 balance.

We keep 25% of what we save you, capped at \$2,000 per bill. \$0 if we save you nothing. If we land the middle of that range, our fee would be about \$601 and you'd keep \$1,801.

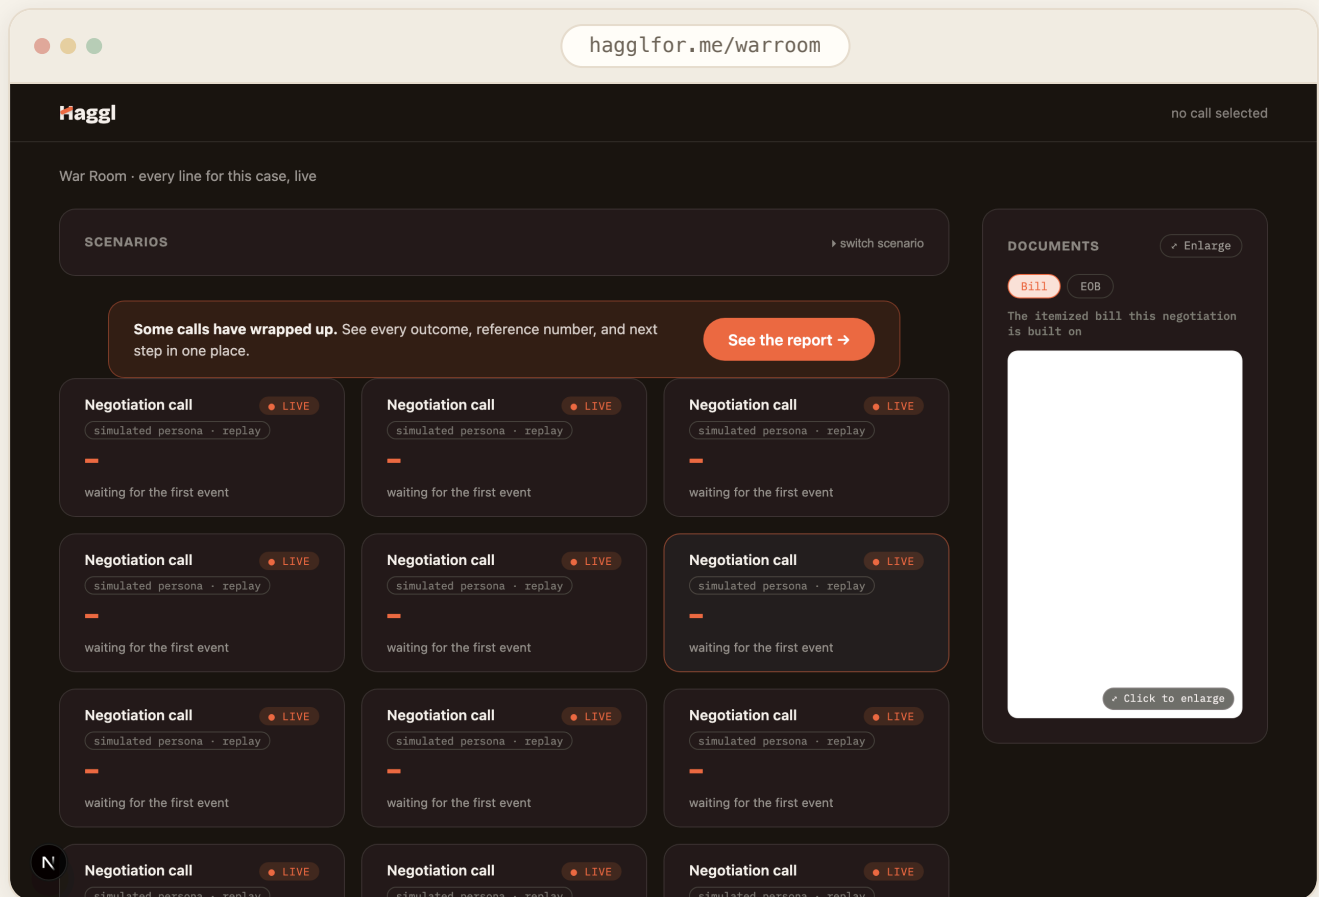

You told us you could put down \$1,700 today — that's the ceiling, we won't offer a dollar more.

N

6 The live War Room

/warroom

Every call streams live: the ladder rung, each tool call, the transcript, the coverage panel, and the honesty audit, all arriving over Supabase Realtime as they happen.

7 The case file

/report

The archived case holds every outcome with the paper trail behind each number, the patient's recorded authorization, and **real phone-call recordings you can play back**. This is the honesty story made checkable.

The screenshot shows the 'Your case' page on the Haggl website. At the top, there's a navigation bar with links: Bills, Action Items, Voice, Profile, War Room, Case file (selected), and Log out. The main heading is 'Your case', followed by a subtext: 'Everything we've done across your 3 bills, in one place, newest first, with the paper trail behind every number.' Below this, the user's name 'Maya Chen' and location 'Boston, MA' are shown. To the right, a balance of '\$588' is displayed, with a note 'locked in so far · 3 parties' and 'Your share after our 25%: \$441'. There are two buttons: 'ACCOUNT # MG-4471983 copy' and 'CLAIM # BCB5MA-2026-118842 copy'. A progress bar shows 'We keep 25% of what we save you, capped at \$2,000 per bill. \$0 if we save you nothing.' Below the progress bar, there are three status indicators: 'Regulatory clocks · Jun 20 statement', 'FAP 211d left', 'GFE dispute 91d left', and 'FDCPA validation 1d left'. A section titled 'Recorded authorization on file' with a checkmark icon contains a text block: 'Maya Chen recorded this on July 19, 2026. When a billing rep challenges whether we're authorized, the agent reads these exact words back and offers to send the recording and a written release. It never claims to play the audio on the line.' Below this is a video player showing a timestamp of '0:00 / 0:00'. A text box below the video contains the recorded authorization text: 'My name is Maya Chen, date of birth March 14th, 1995. This is about my account M G dash 4 4 7 1 9 8 3 at Mercy General Hospital. I authorize Haggl to discuss, negotiate, dispute, and adjust the charges and payment arrangements on this account on my behalf. This is effective today and stays valid until I revoke it. You can reach me directly to confirm.' At the bottom, there are three status indicators: '1 resolved', '2 in progress', and '0 scheduled'. A summary line states: '1 item resolved and 2 still in progress. A callback is lined up with Mercy General Hospital.'

What to watch for as a judge

THE SUBSTANCE

- **It discloses being an AI whenever it is asked**, and never denies it. The post-call audit fails any call where it does.
- **Every number it says is tool-gated**. If a figure did not come from a tool or the case file, the agent does not say it out loud.
- **The coverage panel flips live**. Required questions turn green in the War Room only once the agent has actually covered them.
- **The case file holds real phone-call audio**, not a simulated stack. You can play the recordings back.
- **The `/technical-architecture` page explains the deterministic core**: the language model is the mouth, the code is the brain.

KEPT HONEST

Every figure here is computed by code in the repo and reconciled by an answer key: the \$4,287 balance, the four findings, the \$438 Medicare total, the \$2,633.25 posted cash price, and the 349 passing tests. Nothing in this guide is an invented claim.
