

● AI voice agent • real phone calls

Haggl

an AI advocate that reads your hospital bill
and talks the price **down** on a live call.

THE PROBLEM

The prices aren't fixed. Almost nobody asks.

\$220B

in medical debt held by Americans today

KFF, 2025

3.4×

average hospital markup over Medicare cost, up to 12.6× at outliers

Bai & Anderson, Health Affairs 2015

254%

of Medicare rates, on average, paid by private insurers for the same care

RAND Hospital Price Transparency Study, 2024

49–80%

of medical bills are estimated to contain errors

advocacy-industry estimate, directional

Here's the part that should make you mad

Asking almost always works. Almost nobody asks.

93%

of people who negotiate their bill get it reduced

LendingTree, 2021

78%

who dispute a charge get it reduced or removed

AKASA/YouGov, 2022

64%

of Americans never even challenge a bill they suspect is wrong

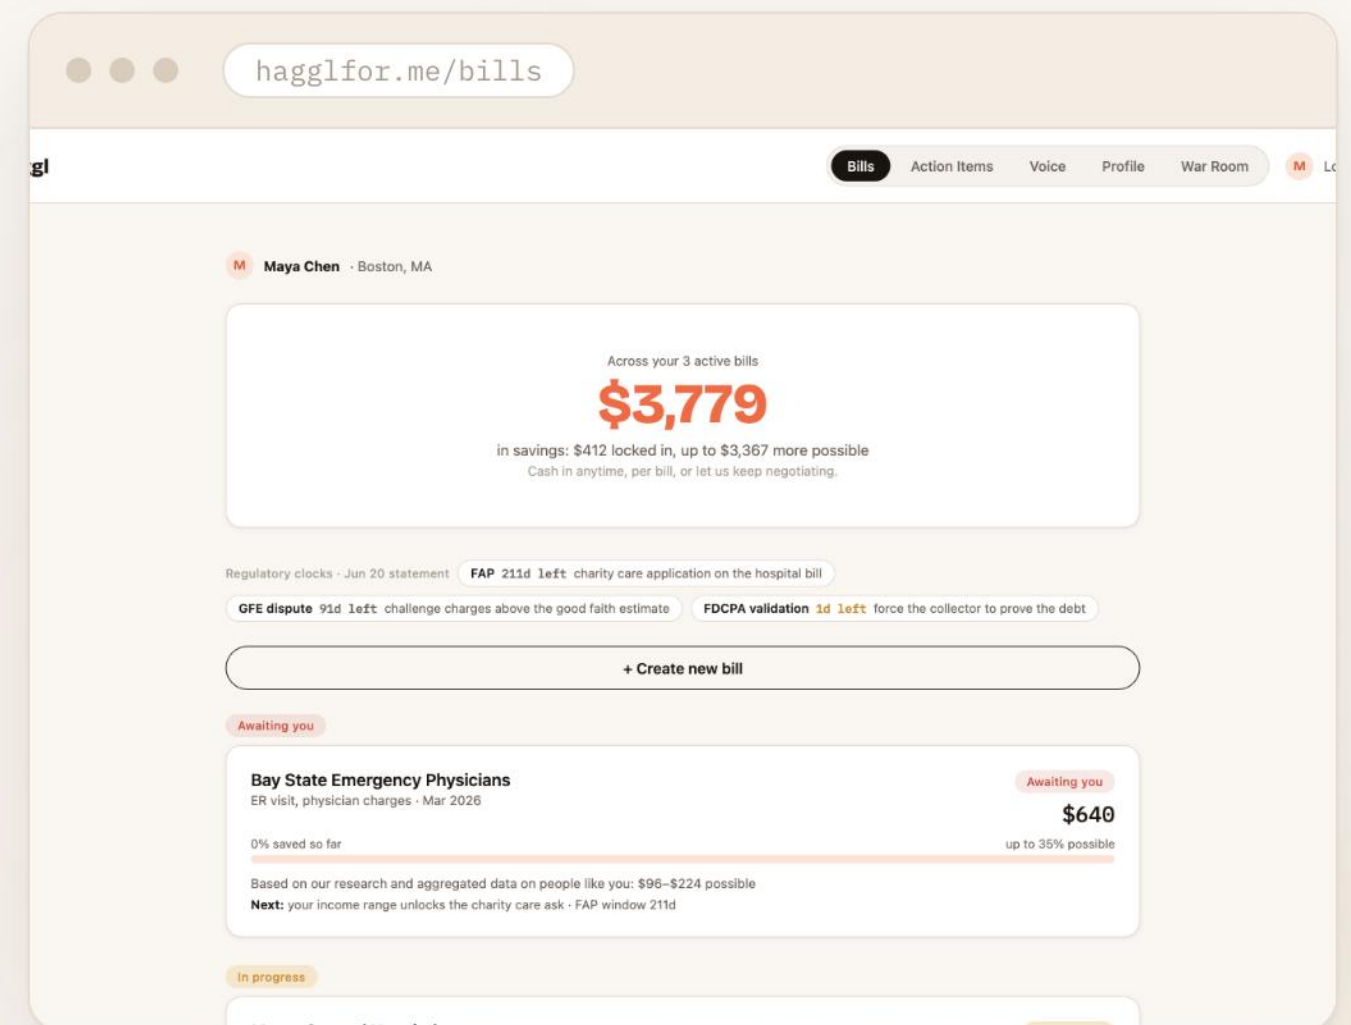

AKASA/YouGov, 2022

WHAT HAGGL DOES

You upload the bill. Haggl works the phones.

- 1 Reads the bill.**
OpenAI vision parses every line, CPT code, and the EOB.
- 2 Finds the errors and the law on your side.**
Duplicates, upcodes, and the statutes that cap what you owe.
- 3 Calls the billing office.**
A real phone call to patient financial services, for you.
- 4 Talks the price down, live.**
It works the balance while you get on with your day.

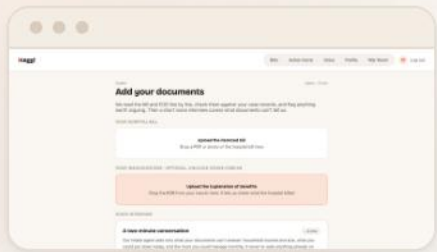

PRODUCT · YOUR BILLS

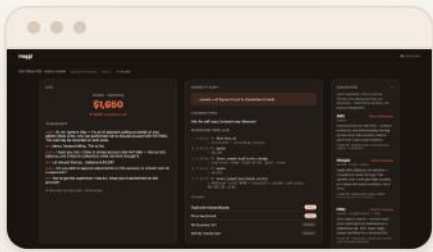

END TO END

What happens after you hit upload.

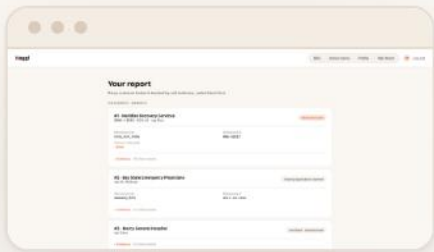

You take four steps. Haggl runs the case in between, and reports back at every handoff.

MAYA CHEN · MERCY GENERAL, BOSTON · LIVE CALL

\$4,287

\$1,650

-62% off

Settled today. Paid in full.

\$4,287 balance → \$3,875 once the duplicate charge came off → rep countered \$2,400 → \$1,650 settled. That is 61.5% off.

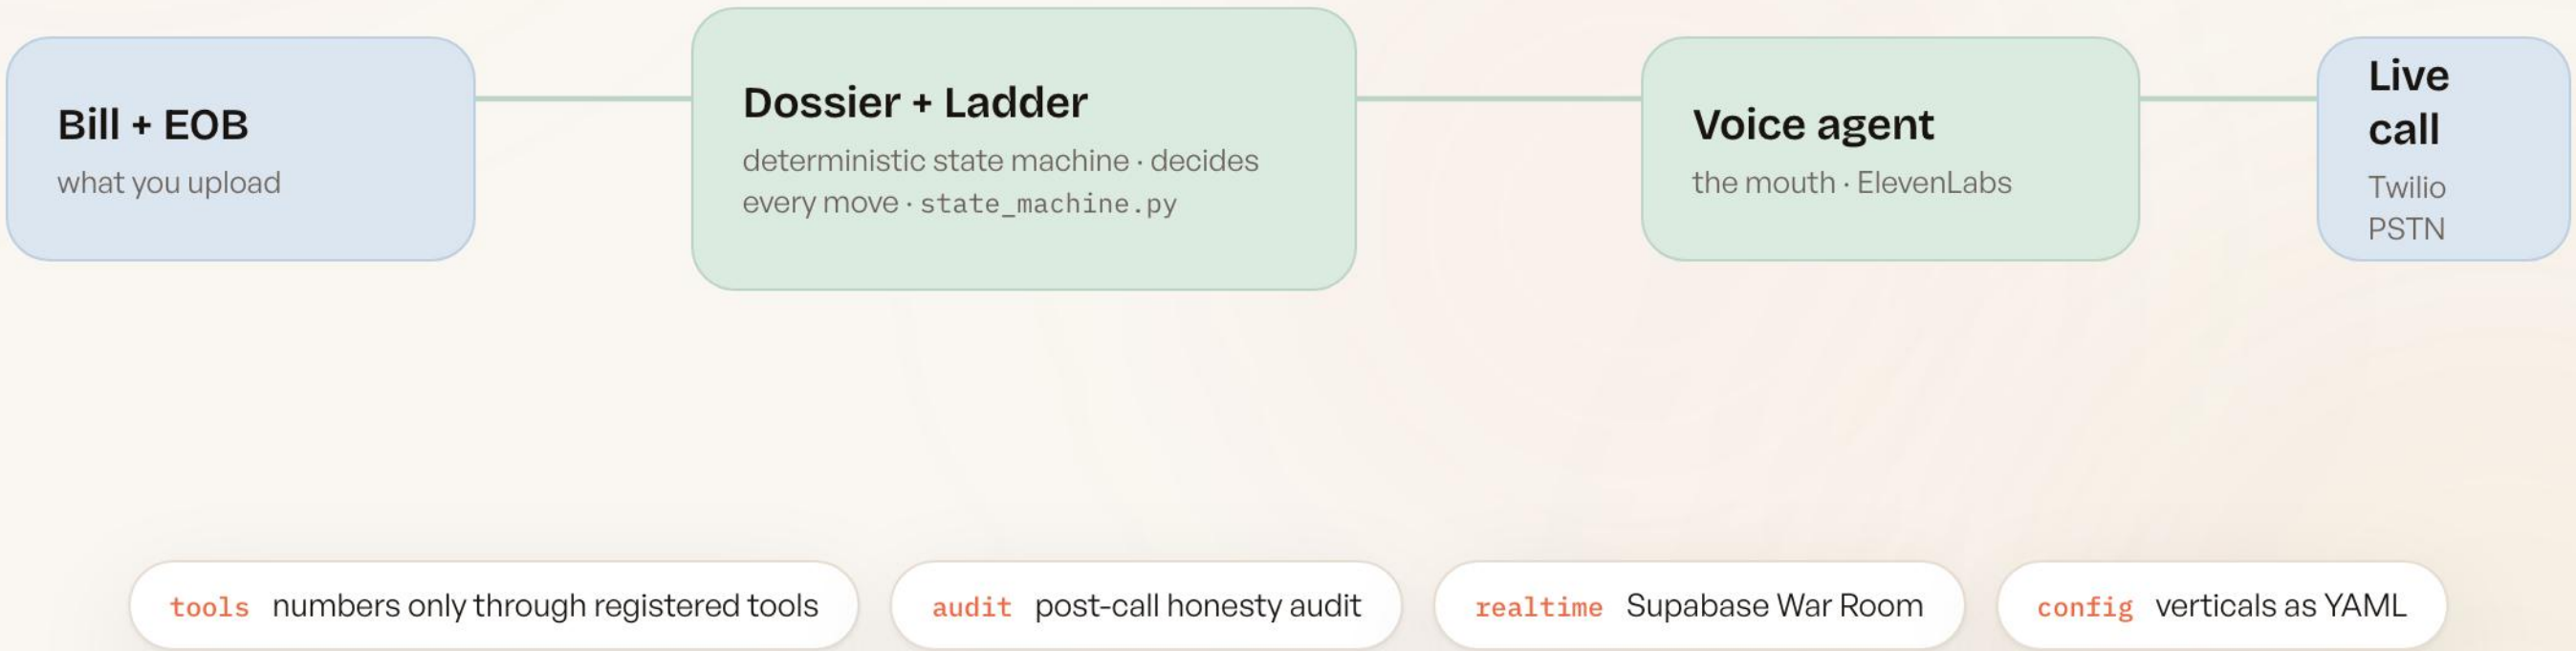

FOUR FLAGS THE ENGINE FOUND

DUPLICATE · CPT 71046 Chest X-ray billed twice	-\$412
UPCODE · 99285 → 99283 ER level higher than the visit	-\$2,011
UNBUNDLED · CPT 80053 Metabolic panel split apart	-\$642
EOB MISMATCH · \$412 Same duplicate. Explains the gap.	reconciled

HOW IT WORKS

The model is the mouth. Not the brain-stem.

A deterministic ladder decides every move. The agent can only speak a number a tool handed it.

The multi-anchor benchmark engine reads a real 3-hospital chargemaster, 881,668 per-payer rows, plus real CMS Medicare rates. On the demo it cites Mercy's own posted cash price, **\$2,633**. Insurers there pay **\$999**. Both public.

NOTHING SYNTHETIC

On a live call, our agent invented a code. So we made numbers come only from tools.

THE SLIP

It filled a gap itself

On a real call, the agent spoke a CPT code that was never in the dossier. Its tools were not registered, so it made one up.

THE FIX

Four webhook tools

Same day, we registered `get_benchmark` and three more. Now every number comes from a tool call, or the agent does not say it.

THE AUDIT

Checked after every call

A computed honesty audit reconciles each claim against the dossier once the call ends. Anything unsupported gets flagged.

REAL END TO END ElevenLabs, Twilio PSTN, Supabase, OpenAI vision. **Nothing on this slide is simulated.**

HARDENED CALL

The plan total counts the interest before we accept it. The agent takes instructions only from its own tools, never the rep. It hangs up on voicemail without leaving account details, and it plays the patient's recorded authorization on every call.

THE CRAFT

It negotiates the way trained humans do.

Every tactic is researched, written down, and enforced in code.

THE LITERATURE

Tactics trained humans use

Calibrated questions.

"What date can I write down for that adjustment?"

Pressure on the document, never the person.

"the file is showing this twice."

Face-saving lines

a rep can carry up to their supervisor.

Park a stalemate

and call back for a different rep.

negotiator_system.md

IN THE VOICE

Conversation science

A disfluency ceiling.

6 to 10 fillers per 100 words, no more.

"uh" before short pauses,

"um" before the longer ones.

Backchannels

roughly every 20 seconds.

Falling pitch

to hand the turn back over.

Read-backs on every number,

like a nurse confirming a lab.

imperfection_style.md ·
verbalization_guide.md

THE ECONOMICS

Why reps say yes

Collections nets about 20 cents on the dollar,
and only after months of waiting.

A same-day settlement at 38.5 cents

is the hospital's rational move.

We cite their own posted cash price,

a number they filed with the government.

docs/why-hospitals-settle.md

None of this is vibes. **The ladder, the caps, and the question checklist are deterministic code; the model only chooses the words.**

LINE BY LINE: BILLED VS. FAIR VS. ACHIEVED

CPT	BILLED	FAIR PRICE	ACHIEVED
00283	\$2,340	\$413	\$334

Benchmarks run on a real 3-hospital chargemaster, 881,668 per-payer rows, plus real CMS Medicare rates. Nine scenarios ship with code-computed answer keys.

PRICING

25%

of what we save you, capped at **\$2,000** per bill.
Nothing upfront, nothing if we don't save you anything.

- ✓ No savings, no fee, ever
- ✓ You see the exact math before you pay anything
- ✓ Cash in partial savings anytime; we only charge on what's actually confirmed

Higher than a document-only bill-review service, because we're doing more: real phone calls, not just a negotiation letter. Still well under what a human medical-bill advocate charges.

The exact math

Maya's bill

Billed \$4,287

Settled on the call \$1,650

Saved **\$2,637**

Our fee · 25% of savings \$659.25

\$2,000 cap · not hit

Maya keeps

\$1,977.75
